Current Reservoir Summary Status – November 25, 2026

The table below summarizes the status of each reservoir as of November 25, 2026.

THIS COLOR = STAGE 1 DROUGHT WATCH CONDITION
THIS COLOR = STAGE 2 DROUGHT WARNING CONDITION
THIS COLOR = STAGE 3 DROUGHT EMERGENCY CONDITION
THIS COLOR = STAGE 4 PRO-RATA CURTAILMENT CONDITION

Reservoir	November 25, 2026 Elevation	November 25, 2026 Capacity (acre-feet)	% Full	[5]Stage 1 Drought Watch Trigger Level		Stage 2 Drought Warning Trigger Level		Stage 3 Drought Emergency Trigger Level		Stage 4 Pro-rata Curtailment Trigger Level

[1]Lakes Possum Kingdom, Granbury, and Whitney are operated together as a sub-system as are Lakes Stillhouse Hollow and Georgetown. As such, the Drought Trigger Levels are based on the collective capacity of the reservoirs.

[2]Capacity and Percent Full values shown in the table are for the BRA storage in Lake Whitney. The current total capacity of Lake Whitney is approximately 550,414 acre-feet, which is 89 percent full.

[3]Water is currently being transferred from Lake Stillhouse Hollow to Lake Georgetown through the Williamson County Regional Raw Water Line (WCRRWL) at a rate of 115 acre-feet per day (about 37.4 mgd).

[4]Lake Georgetown has triggers independent of Stillhouse Hollow that are based on WCRRWL pumping operations. The triggers are as follows: Stage 1 Trigger = 6 months or more of sustained pumping; Stage 2 Trigger = 18 months or more of sustained pumping; Stage 3 Trigger = when the BRA's GM/CEO or his/her designee determines hydrologic conditions are as severe as or worse than the driest 24-month period on record; Stage 4 Trigger = when deemed appropriate by the BRA's GM/CEO or his/her designee due to disruption in WCRRWL pumping operations.

[5]In addition to elevation and storage trigger levels, the Lake Georgetown trigger, the Stage 1 drought condition may also be initiated for a reservoir/reservoir sub-system when the Palmer Hydrological Drought Index (PHDI) is equal to or less than -2.4.
