

# Lake Limestone Low Flow Modifications & Improvements Project

BRA owns and operates Sterling C. Robertson Dam (SCR), which is located in Leon and Robertson Counties. SCR Dam, which forms Lake Limestone Reservoir was completed in 1978. The low flow facilities are located inside the right-end pier (REP), left-end pier (LEP), and intermediate piers (IP). The purpose of the low flow facilities is to release water at rates below 450 cubic feet/second.

## The Project

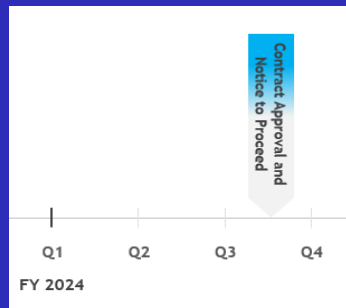

Corrosion defects and hydraulic design issues have been observed in past engineering inspections on various components of the low flow facilities. In response, repair/replacement of the various low flow facilities components (i.e., ball valves, sluice gates, sluice gate operators, low flow piping, bulkheads, etc.) in the Left/Right/Intermediate Piers is necessary. In addition, the low flow facilities need access improvements to support the safety of personnel while operating and maintaining the facilities. New bulkheads will be constructed to support the full dewatering of the low flow facilities.

## Current Project Status 8/25/2023

- Scope and fee negotiations kickoff meeting held on July 11, 2023
- BRA is currently reviewing a scope outline provided by the selected engineer. This outline will be used to establish a baseline for contract development.

## Planned Schedule

Note: BRA Fiscal Year Runs Sept to Aug

## Budget Summary

FY 2023 Budget	\$25,000
FY 2023 Project Expenses (As of 6/30/2023)	\$203
